FOR IMMEDIATE RELEASE

Richmar Introduces New Innovations to Shortwave Diathermy

A Classic Modality Used for Pain Relief, Joint Contractures, and Chronic Inflammatory Conditions

Cleveland, Ohio, April 16, 2018 – [Richmar](#), the innovation leaders in the physiotherapy equipment industry, announced today the release of its new **TheraTouch[®] DX2 Shortwave Diathermy** product. The TheraTouch DX2 brings new innovations in safety, convenience and efficacy to the shortwave diathermy modality not currently offered by competitive models on the market, including:

- Six dosing options including the addition of *two new dosimetry modes within Dose III, made possible by Scientific Dosage Control (SDC) – SDC M and SDC H* – provide tighter titration and gentler, safer treatments;
- *High Efficiency Auto Tuning (HEAT) Technology* which provides efficient coupling for rapid heating and shorter treatment times;
- *A robust mechanical arm* with five articulation points is easily positioned for improved patient comfort while withstanding the everyday rigors of clinical use;
- A full-color touch screen interface equipped with 15 preset evidence-based protocols – *six dosimetry protocols and nine quick links by indication* – and an anatomical library with placement guidelines;
- Advanced onboard software allowing therapists to store up to *99 user-defined favorites*.

The TheraTouch DX2 unit is a very sophisticated, yet simple-to-use unit, and therapists can easily begin treatment with a few quick touches to the home screen.

“We are excited to bring new innovations and cutting-edge technology to a classic modality used in the rehabilitation market,” commented Ryan Moore, Senior Vice President of Richmar. “The TheraTouch DX2 takes shortwave diathermy to a whole new level with its ease of use, safety profile and efficiency in the clinic.”

Shortwave Diathermy is a clinical modality that provides a superior form of deep tissue heating using electromagnetic waves and is commonly used by therapists for the treatment of pain relief, muscle spasms, joint contractures, and chronic inflammatory conditions.
