1. Place the seat upside down near the edge of a sturdy table. Put the button end of the pneumatic cylinder into the opening of the metal flange on the bottom of the seat. (Fig.1) Use minimal force to press the cylinder into the opening.

2. Point the back rest towards the floor and slide the end of the L-Shaped shaft into the flange on the bottom of the seat. (Fig. 2) Once the two (2) holes are lined up, insert the knob and twist it until it is tight.

2. Turn the 5-point base upside down. Press one (1) caster into each of the ends of the 5-point base. (Fig.3)

3. Turn the 5-point base over and place it on level ground so it is resting on all 5 casters. Place the bottom end of the pneumatic cylinder into the center opening of the 5-point base. (Fig. 4) Use minimal force to press the cylinder into the opening.

4. Carefully sit down on the seat* until the cylinder locks into place.

5. Using the lever under the seat, you can adjust its height as needed.

CAUTION:
• Maximum Weight Rating – 300 lbs.
• If components are damaged or missing, contact your dealer immediately. DO NOT use substitute parts.

* You need to weigh at least 90 lbs. to adjust the height of the seat.
